

(019 - 031) Evidence-based Medicine (E B M) for
Complementary & Alternative Medicine (C A M) (2)

Doubt about current EBM concept:

1. Exclusive of empiricism

scientific theory drawn from induction/deduction of
accumulation of experiences.

2. Based on scientific evidences

theory of EBM founded on 3 elementary components

1) Clinical Expertise

2) Evidence (scientific)

3) Patient Preference

depending upon very **personal feeling & desire**, scientifically unevaluable
although calling “scientific”, **ignoring scientificity**

defined by objectivity, universality, reproducibility, logical consistency

What should we do?

Don't worry!
